Data Sheet

MH-Series SAFETY Analog

Magnetostrictive Linear Position Sensors

- Stroke length up to 2500 mm
- Linearity < 0.04 % F.S./Resolution 0.1 mm
- High reliability due to EMC, shock & vibration resistance
- Suitable for Safety Integrity Level 2 (SIL-2) applications

Americas & APAC

MEASURING TECHNOLOGY

The absolute, linear position sensors provided by Temposonics rely on the company's proprietary magnetostrictive technology, which can determine position with a high level of precision and robustness. Each Temposonics® position sensor consists of a ferromagnetic waveguide, a position magnet, a strain pulse converter and supporting electronics. The magnet, connected to the object in motion in the application, generates a magnetic field at its location on the waveguide. A short current pulse is applied to the waveguide. This creates a momentary radial magnetic field and torsional strain on the waveguide. The momentary interaction of the magnetic fields releases a torsional strain pulse that propagates the length of the waveguide. When the ultrasonic wave reaches the beginning of the waveguide it is converted into an electrical signal. Since the speed of the ultrasonic wave in the waveguide is precisely known, the time required to receive the return signal can be converted into a linear position measurement with both high accuracy and repeatability.

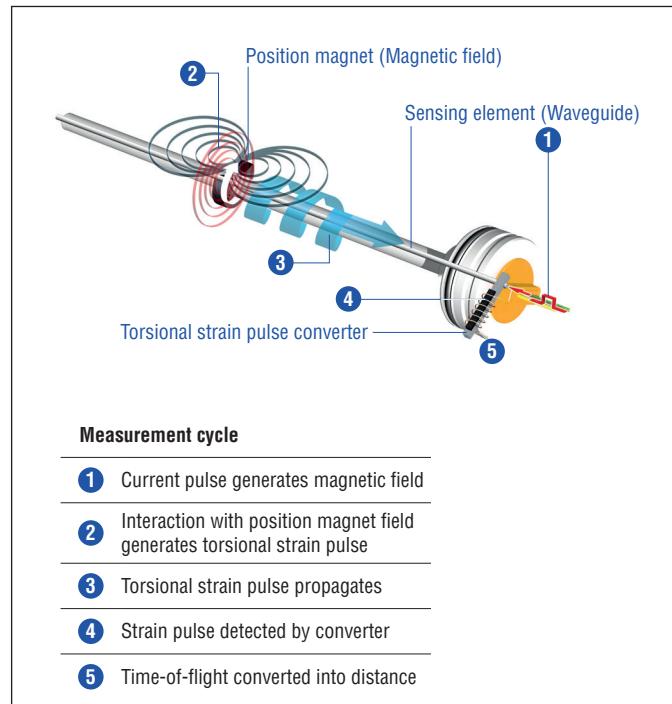

Fig. 1: Time-of-flight based magnetostrictive position sensing principle

MH SAFETY SENSOR

The Temposonics® MH SAFETY sensors are specifically designed for direct stroke measurement in hydraulic cylinders. The MH-Series sensors can be fully sealed and embedded in a cylinder which provides excellent protection against the environment and EMI and ensures a long operating life. The MH-Series sensors can be installed from the head side or the rod side of the cylinder depending on the cylinder design. The sensor is certified according to IEC 61508:2010 and ISO 13849-1:2006 and 13849-2:2003.

MH SENSOR

Temposonics® sensors can be used in versatile mobile machines without any restriction and replace contact-based linear sensors like potentiometers. Highly dynamic systems are controlled safely by means of Temposonics® sensors, thus enhancing the productivity, availability and quality of the working process of the machine. Insensitive to vibration, shock, dust and weathering influence and electro-magnetic disturbances. Temposonics® MH sensors are successfully used in front axle and articulated frame steering cylinders, hydraulic jacks and in steering systems for hydraulic units on agricultural and construction machinery.

Fig. 2: Typical applications

TECHNICAL DATA

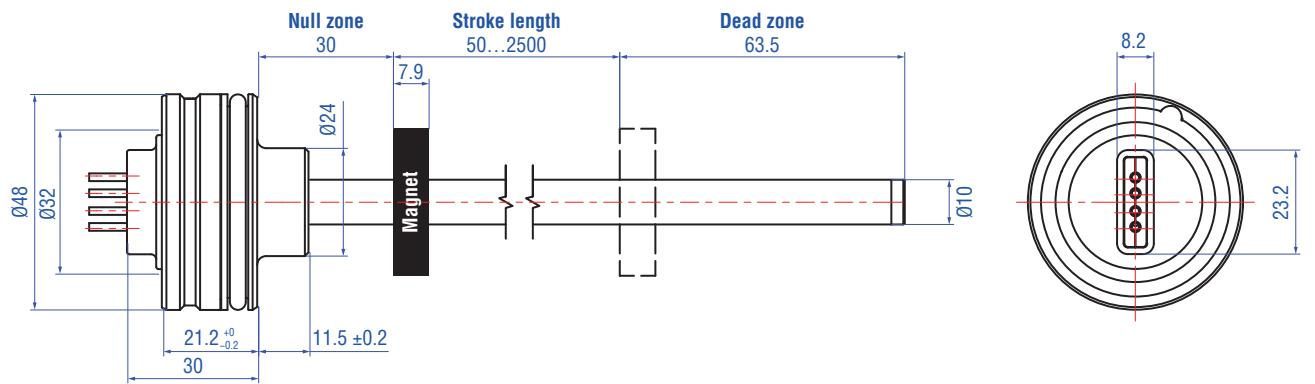

Output					
Signal characteristic	Continuously analog output restricted by noise or A/D converter of control unit				
Voltage	0.5...4.5 VDC with failure signal < 0.5 VDC LO > 4.5 VDC HI				
Current	4...20 mA with failure signal < 4.0 mA LO > 20 mA HI				
Measured value	Position				
Measurement parameters					
Stroke length	50...2500 mm				
Resolution	Typ. 0.1 mm				
Boot up Time	Typ. 250 ms				
Linearity	0050...0250 mm	0255...2000 mm	2005...2500 mm		
	≤ ±0.1 mm	±0.04 % (F.S.)	≤ ±0.8 mm		
Hysteresis	±0.1 mm				
Internal sample rate	2 ms				
Setpoint tolerance	≤ 1 mm				
Operating conditions					
Operating temperature electronics	-40...+100 °C				
Humidity	90 % relative humidity, no condensation, EN 60068-2-30				
Ingress protection - Connector	M12 connector system: IP67/IP69K (connectors correctly fitted), EN 60529 DT connector system: IP69K, EN 60529				
Ingress protection – Sensor housing	IP67, EN 60529				
Shock test	100 g (6 ms) single shock per axis, IEC 60068-2-27 50 g (11 ms) at 1000 shocks per axis, IEC 60068-2-27				
Vibration	Operational sine vibration test IEC 60068-2-6: 25 g (5...2000 Hz) Survival random vibration test IEC 60068-2-64: 15 g RMS (20...2000 Hz) 12 h per axis				
EMC	Compliant with: ISO 13766-1:2006 Earth-moving and building construction machinery ISO 14982:1998 Agricultural and forest machines The MH sensors fulfill the requirements of the EMC directives 2014/30/EU, UKSI 2016 No. 1091 and TR CU 020/2011				
EMI	100 V/m (200...2000 MHz), ISO 11452-2: 2019 200 mA (20...400 MHz), ISO 11452-4: 2011				
Operating pressure ratings		Pressure (according to DIN EN ISO 19879)*			
PN (nominal operating)	350 bar				
Pmax (max. overload)	450 bar				
Pstatic (proof pressure)	625 bar				
Design/Material					
Sensor electronics housing	Stainless steel 1.4305 (AISI 303)				
Sealing	O-ring: H-NBR 70				
Sensor rod	Stainless steel 1.4306 (AISI 304L)				
RoHS compliance	The used materials are compliant with the requirements of EU Directive 2011/65/EU and EU Regulation 2015/863 as well as UKSI 2022 No. 622 with amendments.				
Electrical installation					
Connection type	M12 male connector or DT connector system				
Operating voltage	12 VDC (8...32 VDC)		24 VDC (16...32 VDC)		
Current consumption	Typ. ≤ 100 mA		Typ. ≤ 50 mA		
Load (output VDC)	R _L > 10 kΩ		R _L > 10 kΩ		
Load current (output VDC)	Typ. 0.5 mA		Typ. 0.5 mA		
Load (output mA)	R _L < 250 Ω		R _L < 500 Ω		
Inrush current	Max. 2.5 A/2 ms		Max. 4.5 A / 2 ms		
Supply voltage ripple	< 1 % _{PP}				
Power drain	< 1 W				
Over voltage protection (GND - VDC)	Up to +36 VDC				
Polarity protection (GND - VDC)	Up to -36 VDC				
Insulation Resistance	R ≥ 10 MΩ @ 60 sec				
Electric strength	500 VDC (DC GND to chassis GND)				

* / According to calculations under use of the FKM guideline

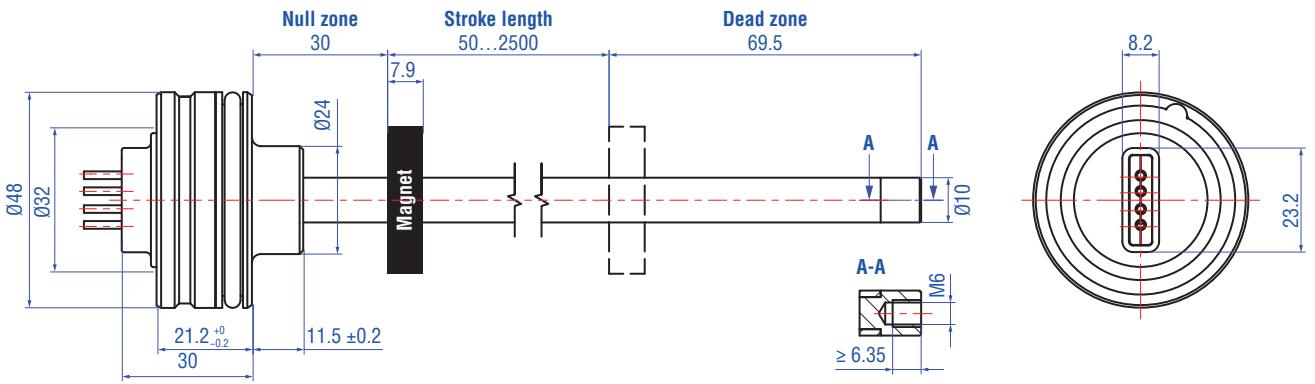

Cycles	Ø 10 mm sensor rod
Dynamic pressure: < 2 × 10 ⁶ pressure cycles	350 bar
Static pressure: < 2 × 10 ⁴ pressure cycles	450 bar
Proof pressure: Maximum 5 minutes testing time for cylinder pressure test	625 bar

TECHNICAL DRAWING

MH-C – Rod: Ø 10 mm/Dead zone: 63.5 mm/Stroke length: 50...2500 mm

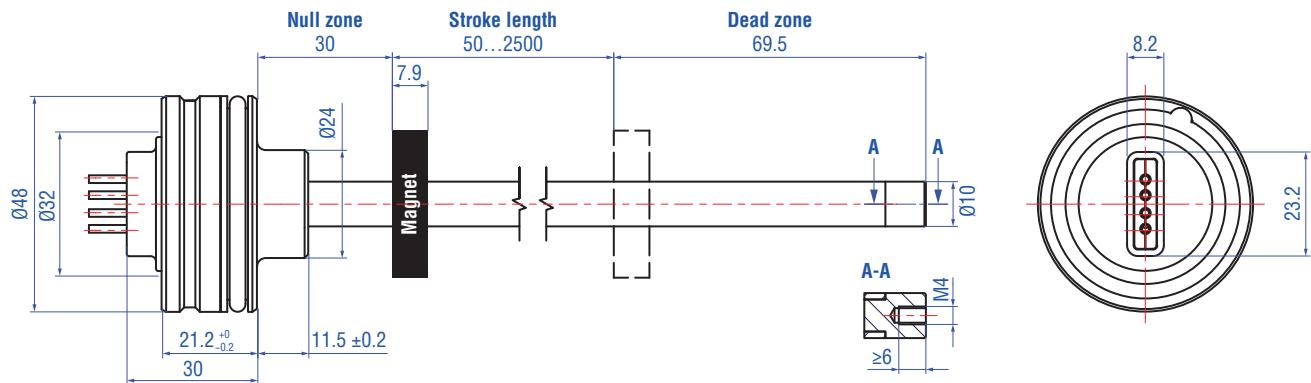

MH-L – Rod: Ø 10 mm + end plug with female M6 thread/Dead zone: 69.5 mm/Stroke length: 50...2500 mm

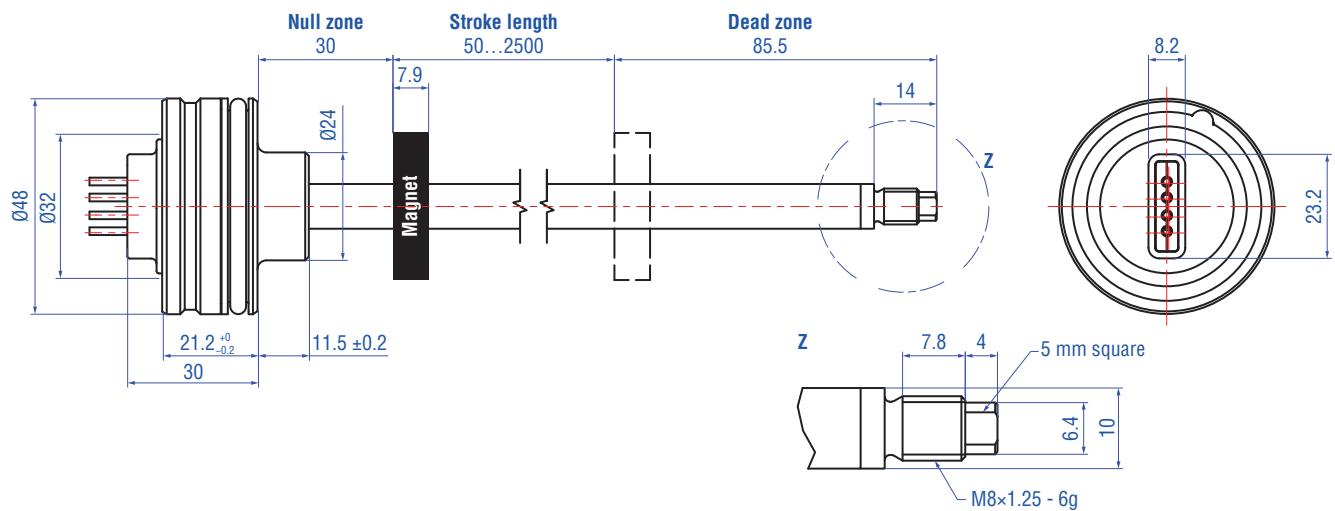

Controlling design dimensions are in millimeters

Pigtail cable (T...A)

- PUR cable
- Ø 5 mm, non-shielded, 3 × 0.5 mm²
- Flexible, oil resistance

Connector wiring	Color	Function
	YE	n.c.
	BN	VDC
	WH	GND
	GN	SIG

Connection schematics

NOTICE

To ensure proper operation of the sensor, the hydraulic cylinder must be connected to the machine ground. Grounding is often ensured by the mechanical contact between the cylinder and other machine elements. If the cylinder is connected with the machine separately, separate grounding, for example via a grounding strap directly on the cylinder must be ensured.

Fig. 9: Connection schematics

MECHANICAL INSTALLATION

Installation in a hydraulic cylinder

The robust Tempsonics® MH sensor is designed for direct stroke measurement in hydraulic cylinders. The robust Tempsonics® MH sensor is designed for direct stroke measurement in hydraulic cylinders.

The Tempsonics® MH sensor can be installed from the head side or the rod side of the cylinder depending on the cylinder design.

In both installation methods, the sensor seals the cylinder by using an O-ring and backup ring which is installed on the sensor housing.

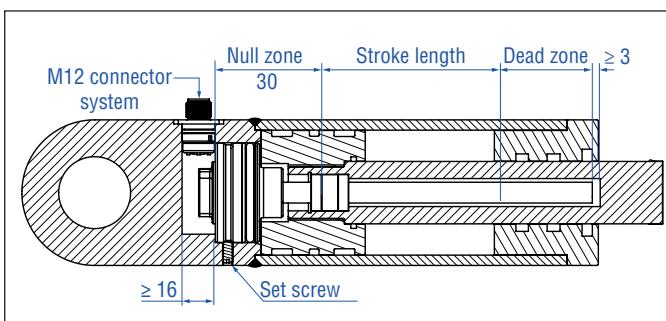

Fig. 6: Example of In-Cylinder assembly with M12 connector system

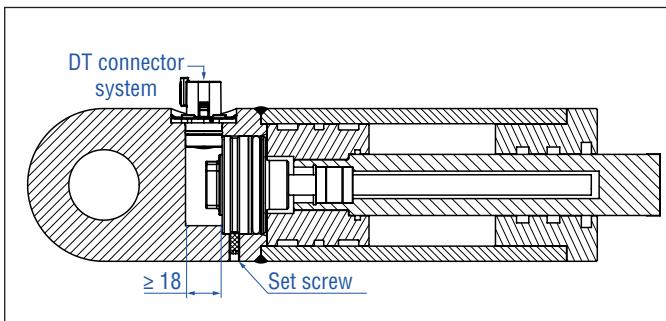

Fig. 7: Example of In-Cylinder assembly with DT connector system

NOTICE

Installation Manual for MH sensors ([document part no. 551289](#))
Installation Manual for DT connector system
([document part no. 552093](#))

NOTICE

Sealing:

- Take action against water ingress by sealing the cavity on the cover side.
- Cable glands should have IP69K rating.

Pressure:

- Do not exceed the operating pressure.

Avoid part collision:

- The bore depth in piston:
Null zone + stroke length + dead zone + > 3 mm
- The position magnet shall not touch the pressure pipe.
- Note piston rod borehole diameter: $\geq \varnothing 13$ mm

Space requirements

M12 connector system / cable outlet

a	b	c	d	e
52 mm	48H8	21.2 mm	> 32.5 mm < 40 mm	> 16 mm

DT connector system

a	b	c	d	e
52 mm	48H8	21.2 mm	> 32.5 mm < 40 mm	> 18 mm

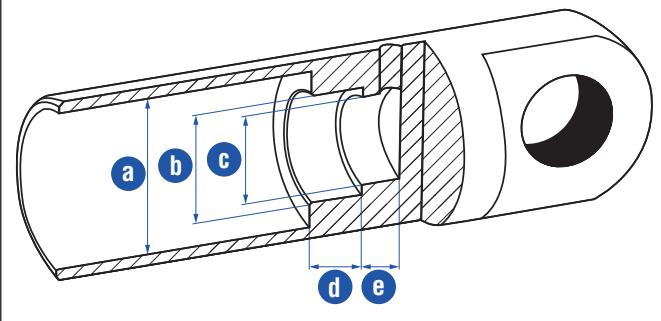

Fig. 8: Space requirements for cylinder

Controlling design dimensions are in millimeters

Set screw

e.g. retaining with set screw (with flat point) ISO 4026 M5x10 (DIN 913).
Fastening torque: $\leq 0.5 \text{ Nm}$

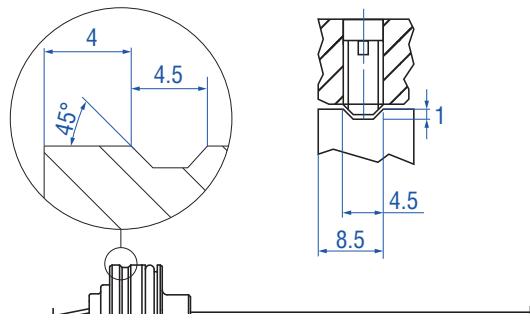

Fig. 10: Set screw

NOTICE**Avoid sensor damage:**

- The screw may touch the sensor housing.
- Tightening torque: $\leq 0.5 \text{ Nm}$.

Lock set screw:

- Lock the set screw against falling out.
- Make sure that the threads are free of oil, grease and dirt.

Sealing:

- Consider a seal against water ingress (capillary effect).
